Lens 1 · Content & UX

Scoring: +1 visible · +2 hidden (needed a tool/test) · +1 evidence bonus. Good findings count too. Look, don't touch: no scanners, no logins, no real data in forms.

Team: Yavuz Eren Yasar **Round 1:** Campus Café before / after **Round 2:** gov.uk / burulas.com.tr

Checklist

Check	How
5-second test: is it clear what the site is for and who it is for?	Open the page, look 5 s, look away, say it
Can you find **contact information** in < 3 clicks?	Click through
Is the **navigation** clear? Do you always know where you are?	Click through 3 pages
Is text **readable**: short paragraphs, clear headings, plain language?	Read a page
Are there clear **calls to action** (what should I do next?)	Look for buttons/links
Does every page have a **meaningful title**?	Look at the browser tab; `view-source:` → `<title>`
Is there a **meta description** for search engines?	`view-source:` → search `description`
Is the page **language** declared?	`view-source:` → `<html lang="…">`
Are there **broken links** or dead ends?	Click; watch for 404
Impressum (imprint) present? (German sites)	Footer

If you're fast: Search for the site on a search engine. How does its result look (title, description)? Share a link in a messenger: does a preview card appear (Open Graph)?

Findings

#	Finding (be specific!)	Site	Good/Bad	Vis./Hidden	Evidence	Pts
1	it is obvious that its about the transportation					
2	in 1 click i can find the contact information about help and about complaining					
3	navbar is pretty clear and text content is clear aswell					
4	is pretty clear what should do next when i click for bus services its sends me directly to another page only for bus services					
5	not every page have a title that identifies which page					
6	we only have turkish as option that might be a issue for foreigners that might want to visit the city					
					Total	

Lens 2 · Visual design

Scoring: +1 visible · +2 hidden (needed a tool/test) · +1 evidence bonus. Good findings count too. Look, don't touch: no scanners, no logins, no real data in forms.

Team: _____ **Round 1:** Campus Café before / after **Round 2:** gov.uk / burulas.com.tr

Checklist

Check	How
Is there a clear **visual hierarchy**? What do you see 1st, 2nd, 3rd?	Squint test: half-close your eyes
Typography: how many fonts? Body text size? Line length?	DevTools → inspect text → Computed → `font-family`, `font-size`
Colour: consistent palette? Enough **contrast** for text?	DevTools → inspect text → colour picker shows contrast ratio
Whitespace: does the layout breathe or feel crowded?	Look
Consistency: do buttons, links, headings look the same on every page?	Compare 3 pages
Images: sharp, relevant, consistent style? Text inside images?	Zoom in; try to select the text
Is it obvious what is **clickable**?	Hover; look for link styling
Where do the **fonts** come from?	Network tab → filter "Font" → domain
How large are the **images** (file size vs displayed size)?	Network tab → filter "Img" → size; inspect `<img>`

If you're fast: Inspect the CSS of one button. Does the site use CSS custom properties (`--something`) for colours? What does that tell you about how it was built?

Findings

#	Finding (be specific!)	Site	Good/Bad	Vis./Hidden	Evidence	Pts
1	too many different fonts that tire eyes it should be less things going on					
2	the color palette for it is disgusting because it kind of blends with the background					
3	the space between the texts are quite fine					
4	the links doesnt have anything that underlies so u dont really know if something is clickable or not					
5						
6

Lens 3 · Responsiveness

Scoring: +1 visible · +2 hidden (needed a tool/test) · +1 evidence bonus. Good findings count too. Look, don't touch: no scanners, no logins, no real data in forms.

Team: _____ **Round 1:** Campus Café before / after **Round 2:** gov.uk / burulas.com.tr

Checklist

Check	How
Test at **3 widths**: 375 px (phone), 768 px (tablet), 1440 px (desktop)	DevTools → device toolbar (`Ctrl/Cmd+Shift+M`)
Is there **horizontal scrolling** on a phone?	Swipe sideways at 375 px; also try 320 px
Does the **navigation** still work on a phone (e.g. a menu button)?	Click/tap it in device mode
Is the text **readable** without zooming on a phone?	Look at body text in device mode
Are buttons and links **big enough to tap** (approx. ≥ 44 × 44 px)?	Inspect an element → box size
Do **images** scale, or overflow / get cut off?	Resize the window slowly
Landscape mode on a phone?	Rotate icon in device toolbar
Is the **viewport meta tag** set?	`view-source:` → `<meta name="viewport" …>`
Does the CSS use **media queries** or a flexible layout (Flexbox/Grid)?	DevTools → Elements → Styles; look for `@media`, `display: flex/grid`

If you're fast: Open the site on your **real phone**. Is anything different from DevTools' device mode? Why could that be?

Findings

#	Finding (be specific!)	Site	Good/Bad	Vis./Hidden	Evidence	Pts
1	it supporst the width gor every kinda device u wanna go with					
2	navbar and horizontal scrolling works pretty fine					
3	i can read pretty clear even with the phone view					
4	the buttons doesnt fit the 44x44 criteria					
5	yes the website use meadia querries					
6

Lens 4 · Accessibility

Scoring: +1 visible · +2 hidden (needed a tool/test) · +1 evidence bonus. Good findings count too. Look, don't touch: no scanners, no logins, no real data in forms.

Team: _____ **Round 1:** Campus Café before / after **Round 2:** gov.uk / burulas.com.tr

Checklist

Check	How
Can you use the **whole site with the keyboard only**?	Put the mouse away. `Tab`, `Shift+Tab`, `Enter`, `Space`
Is the **focus always visible** (where am I)?	While tabbing, watch for an outline/highlight
Is there a **"skip to content"** link?	Press `Tab` once right after loading
Does it work at **200 % zoom**?	`Ctrl/Cmd` + four times
Do images have meaningful **alt texts**?	WAVE extension → errors/alerts; or inspect `<img alt="…">`
Is there a logical **heading structure** (h1 → h2 → h3)?	WAVE → "Structure" tab
Do **form fields have labels**?	WAVE; or click the label text: does the field get focus?
Is the **text contrast** sufficient?	WAVE → "Contrast" tab
Is anything **moving/blinking** that you cannot stop?	Look
Is the page **language** set (for screen readers)?	`view-source:` → `<html lang="…">`

If you're fast: Turn on your system's screen reader for 2 minutes (macOS: `Cmd+F5` VoiceOver; Windows: `Ctrl+Win+Enter` Narrator) and try to find the contact page. Run Lighthouse → Accessibility. Does it find everything you found manually?

Findings

#	Finding (be specific!)	Site	Good/Bad	Vis./Hidden	Evidence	Pts
1	it is possible the use certain features but it is challenging to know where exactly your current position is					
2	it is working even when its 200%					
3	12 of the images are missing an alt text					
4	yea it makes sense all the headings under the big topic is getting smaller and smaller					
5						
6	no error is detected in the contrast of the text but i think it should be more distinct color instead of gray					
					Total	

Lens 5 · Performance

Scoring: +1 visible · +2 hidden (needed a tool/test) · +1 evidence bonus. Good findings count too. Look, don't touch: no scanners, no logins, no real data in forms.

Team: _____ **Round 1:** Campus Café before / after **Round 2:** gov.uk / burulas.com.tr

Checklist

Check	How
Lighthouse Performance score (mobile)	DevTools → Lighthouse → Mobile → Analyze (incognito window!)
LCP (Largest Contentful Paint): when is the main content visible?	Lighthouse report → Metrics
CLS (Cumulative Layout Shift): does content jump while loading?	Lighthouse; also watch while reloading
TBT (Total Blocking Time), a lab proxy for responsiveness (INP)	Lighthouse report
Page weight: total transferred size	Network tab → reload → bottom bar "transferred"
Number of requests	Network tab → bottom bar
Largest single file: what is it?	Network tab → sort by size
Slow connection: how does it feel on mobile data?	Network tab → throttling "Slow 4G" → reload
Image formats: JPG/PNG, or modern WebP/AVIF?	Network tab → filter "Img" → Type column
Is JavaScript needed to see the content?	DevTools → `Ctrl/Cmd+Shift+P` → "Disable JavaScript" → reload

If you're fast: Run Lighthouse 3 times on the same page. Do the scores change? Why? Look up the site on pagespeed.web.dev: are there "real user" field data?

Findings

#	Finding (be specific!)	Site	Good/Bad	Vis./Hidden	Evidence	Pts
1	it says modern HTTP improvements can save 1,500 ms.					
2	Render blocking resources can delay page rendering by 4,440 ms.					
3	The website makes 90 request it affects the loading					
4	8.4 sec on Slow 4G					
5						
6						
					Total	

Lens 6 · Security & privacy

Scoring: +1 visible · +2 hidden (needed a tool/test) · +1 evidence bonus. Good findings count too. Look, don't touch: no scanners, no logins, no real data in forms.

Team: _____ **Round 1:** Campus Café before / after **Round 2:** gov.uk / _____

> **Look, don't touch.** Only passive checks in your own browser. No scanners, no probing of forms, no attack tools.

Checklist

Check	How
Is the site served over **HTTPS**? Valid certificate?	Padlock / site info icon in the address bar
What happens with `http://…` (without "s")? Redirect to HTTPS?	Type the URL with `http://`
Cookie banner: is "Reject" as easy as "Accept"?	Look at the banner; count clicks
Are **cookies set before you consent**?	Fresh incognito window → DevTools → Application → Cookies, *before* clicking the banner
Which **third parties** are contacted? (analytics, fonts, ads, videos)	Network tab → reload → look at the "Domain" column (right-click header to add it)
Security headers present? `Strict-Transport-Security`, `Content-Security-Policy`, `X-Content-Type-Options`	Network tab → click the first document request → Response Headers
Mixed content or other warnings?	DevTools → Console
Legal pages: Impressum & privacy policy (Datenschutzerklärung)?	Footer
Do forms send data over HTTPS?	Inspect `<form action="…">`

If you're fast: Compare the number of third-party domains on site A and site B. Which site would you trust more with your data, and why? Check the response headers of gov.uk: which security headers do they set?

Findings

#	Finding (be specific!)	Site	Good/Bad	Vis./Hidden	Evidence	Pts
1	It is served over https					
2	It also automatically redirects to https					
3	It has a privacy policy at the and of the page					
4	It uses security headers for protection					
5						
6						
					Total
