Session 3 Labs: Semantic HTML

CM-501 Frontend Web Development · EPA 2

Names: _____

Activity · Tag that box (teams, 10 min)

Write the HTML element(s) you would use for every number. More than one element per box is allowed (e.g. `nav` + `ul`).

#	Element(s)	#	Element(s)	#	Element(s)
1	header	7	h1	13	button
2	a+img	8	article	14	aside
3	navigation	9	figure+img+figcap	15	table
4	form+input+button	10	h2	16	form+input+button
5	nav+ol+li+a	11	time	17	footer+adress
6	main	12	a(link)		

Lab D · Div-soup surgery (pairs, 20 min)

File: `lab-files/events-divsoup.html` (course page). One laptop per pair; switch the driver after 10 minutes.

Your job: make the page semantic. It should look almost the same afterwards. You may change the selectors in the `<style>` block when you change elements (e.g. `.header` → `header`).

Checklist

- ☐ `<html lang="en">`, a meaningful `<title>` (page · site), viewport meta tag
- ☐ landmarks: `header`, `nav` (with `aria-label`), `main` (exactly one), `aside`, `footer`
- ☐ **one** `h1`, then `h2` (no skipped levels)
- ☐ navigation = list of **real links** (`<a href>`), no `onclick`
- ☐ every event is an `<article>` with a heading
- ☐ dates in `<time datetime="…">`
- ☐ "Reserve a seat": **link or button?** Decide and justify: link because it opens to the other page
- ☐ opening hours: which element fits name–value pairs? dl
- ☐ address in `<address>`, phone number as a `tel:` link
- ☐ bonus: a **skip link** to `main`

Check your result

1. **validator.w3.org/nu** → "Check by file upload": number of errors: 0 warnings: 0
2. DevTools → Elements → **Accessibility** pane (Chrome: enable *full-page accessibility tree*). Sketch the top level of the tree:

   RootWebArea
   link
   banner
   main
   complementary
   content info

3. Disable CSS (`for (const s of document.styleSheets) s.disabled = true;`). Does the page still make sense? yes i cant still understaand everything inside pretty clear

Lab E · Before vs after, without looking (pairs, 25 min)

Tester: uses a **screen reader** (or **keyboard only**, if no screen reader works). Eyes closed or screen covered. **Observer:** reads the task aloud, measures the time, writes down what happened. **Swap roles after task 2.**

Pages: `https://rathmayers.github.io/campus-cafe-demo/before/` and `…/after/`

	macOS VoiceOver	Windows NVDA	Keyboard only
on / off	`Cmd + F5`	`Ctrl + Alt + N` / `Insert + Q`	–
next heading	rotor `VO + U`, choose Headings	`H`	–
next landmark	rotor → Landmarks	`D`	–
list of links	rotor → Links	`Insert + F7`	–
next element / activate	`VO + →` / `VO + Space`	↓ / `Enter`	`Tab` / `Enter`, `Space`

VO = `Ctrl + Option`. Stop the task after 3 minutes and write "not done".

Task	Version	Done?	Time	What got in the way?
1. What is **today's special** and what does it cost? (start: home page)	before		couldnt	unlabeled graphic it says
	after		10sec	i got it only buy using h
2. Go to the **menu**. How much is a **flat white**?	before		2 min	i here the click here and fgot it from there
	after		30 sec	directly from nav bar i found it
3. Find the café's **phone number**.	before		couldnt	it says missing image
	after		14 sec	i got easily by arrow end of the page and found it
4. **Keyboard only:** from the home page, reach the contact form and put the focus in the first field. Can you **see** where the focus is?	before		2.27 min	got their from links on events page and i see where am i
	after		24 sec	couldnt get their with heading but arrows through the nav bar easily

Our three biggest barriers on "before" and the WCAG principle (Perceivable, Operable, Understandable, Robust):

1. P couldnt see todays special because it said unlabeled graphic (P / O / U / R)
2. U to the contact form pretty luckily but so tiring (P / O / U / R)
3. ~~O couldnt go to the nav bar with tab~~ (P / O / U / R)

Activity · Alt text or not? (teams, 10 min)

For each image: write the `alt` text, or `alt=""` if it is decorative, and say why in one sentence.

	Image and context	`alt="…"`	Why?
A	“Today’s special” image with text, on the menu page	alt="Today's special Pumpkin Spice Latte – 3,90 € Only until 4 pm."	u have information so alt text needs to give same info
B	image with phone number and e-mail, on the contact page	alt="Phone: +49 89 000 000 00 E-mail: hello@campus-cafe.example"	same logic people needs this info
C	croissant photo next to the heading “Fresh every morning”	alt=""	photo adds no info
D	microphone on a stage, in the teaser “Open Mic Night”	alt=""	microphone is there only to show
E	big hero image behind the text “Good coffee for long study days”	alt=""	its not the real message they need
F	Instagram icon, the only content of a link	alt="Campus Café on Instagram"	must say about what is the link about

Which two of these images should not be images at all? Why? A and B because like on the after because they are already text inside picture
